RECOMMENDATIONS

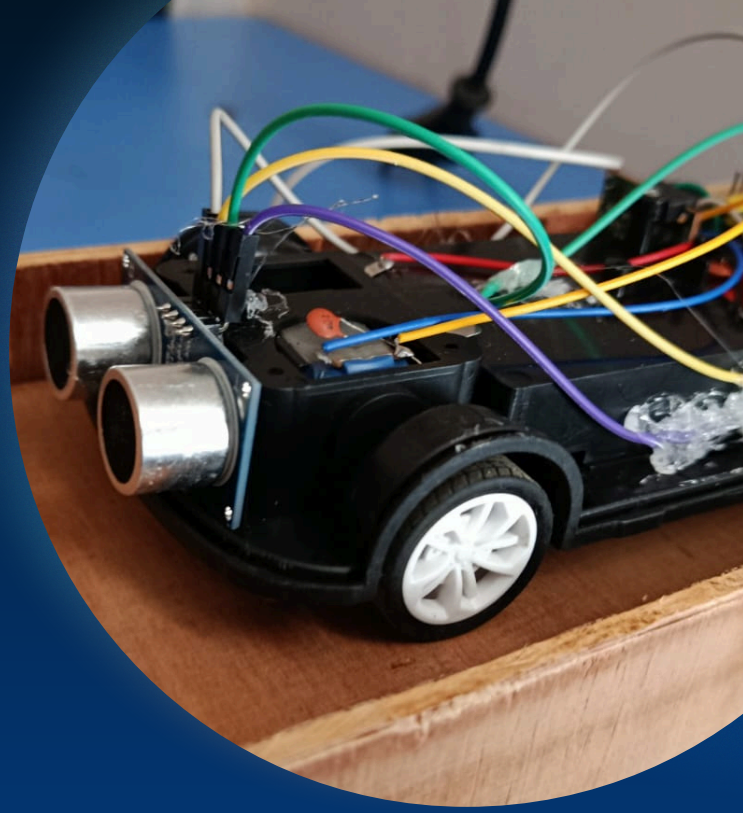
Improve Measurement Accuracy: using better, more accurate sensors along with the processing unit is critical for a larger scale building, considering its scarcity regarding small scale prototypes.

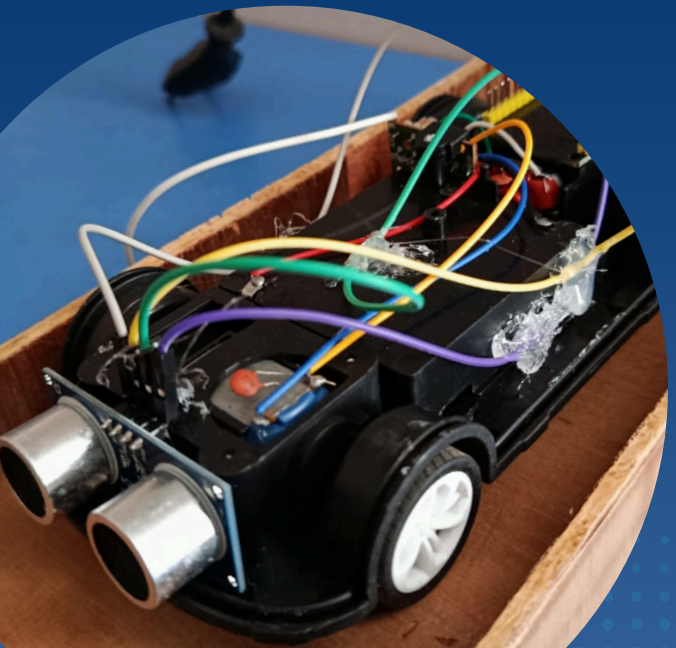
Reinforce Mechanical Components: Strengthen the car chassis and overall car body and the track, ensure stable performance and reduce errors considering high-speed testing

Adopt adaptive design: use flexible sensor and hardware modules for replacements and customizations for educational lab experiments.

Increase Sustainability Impact: adopt a well-studied technique of recycling waste materials (using a well-studied plan of which materials will be recycled and how to ensure having the best impact on earth)

Ensure Reliability and Safety: to make a final product out of our prototype, it must meet several safety requirements and standards to withstand any crisis and save students from any fatal error





TECHNO-METER

Technology solutions for a smarter and more in-depth learning experience

ABOUT US

E-wastes may be the most hazardous because of including various metals and semi-conductors which also are valuable to be recycled, so our chosen solution was reusing them in scientific field to be more beneficial if they are exploited properly. As a result these wastes have been used in a better way in the design of our solution which is a speedometer that is built by E-wastes recycled from discarded electric device around us , the design requirements of this solution includes being used in more than one lab or being multi-functional , it mainly depends on a recycled microcontroller from old smart camera and an old toy car with some sensors that are connected to the microcontroller .

WHY CHOOSE US

Our advantages are:

The contraption is 100% recycled, having every component extracted from discarded E-gadgets.

Enabling an interactive learning experience.

Being IoT-integrated, linking the ESP32 CAM to a website that displays readings.

COMPANY VISION AND MISSION

Our Vision

To become a trusted technology partner that helps students comprehend concepts of velocity and acceleration.

Our Mission

- Reducing the overall E-waste pollution.
- Ensuring an interactive learning environment.
- Improving the understanding of acceleration and velocity concepts among high schoolers.
